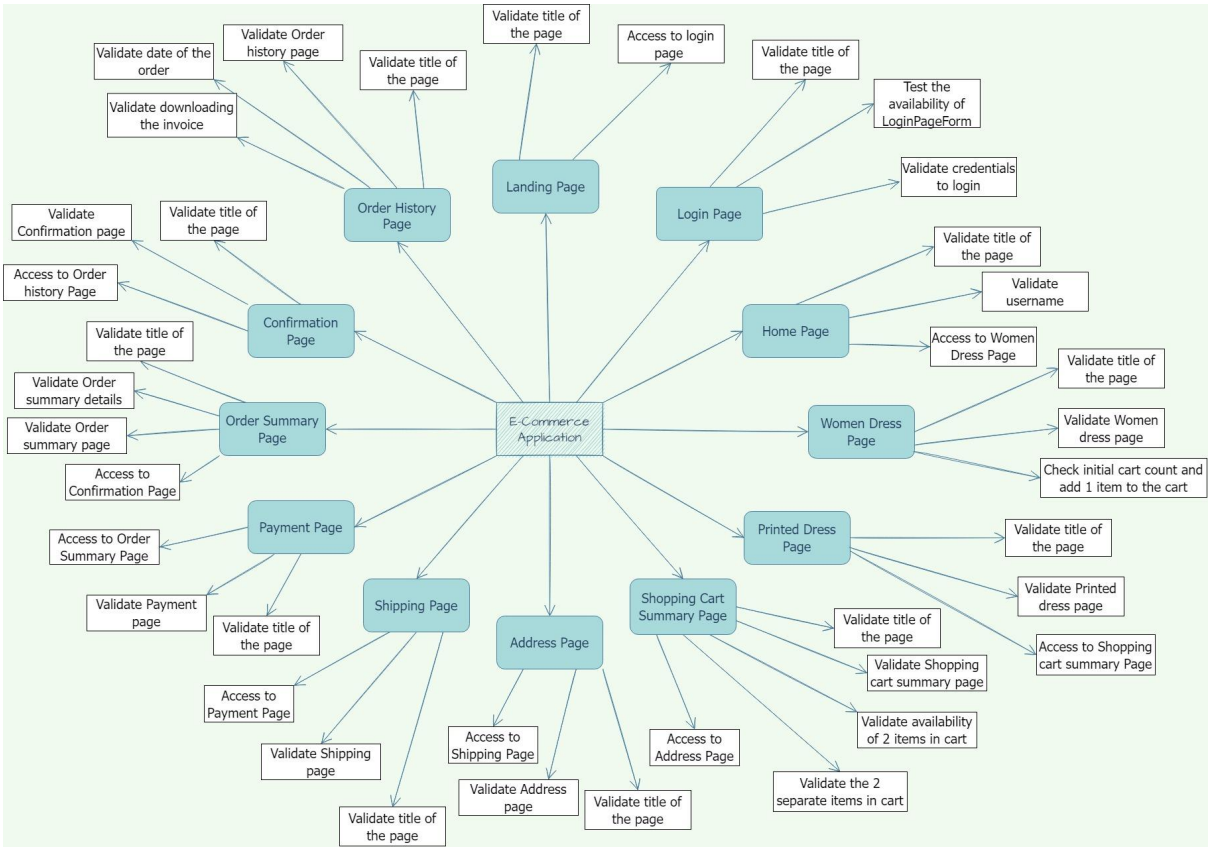
Y.O. Windsor	17021014	2017/IS/101

Project 02 - Validating the E-commerce application to add the products to the cart

GitHub Repo link - https://github.com/DuminduChamal/MyStoreTestAutomation

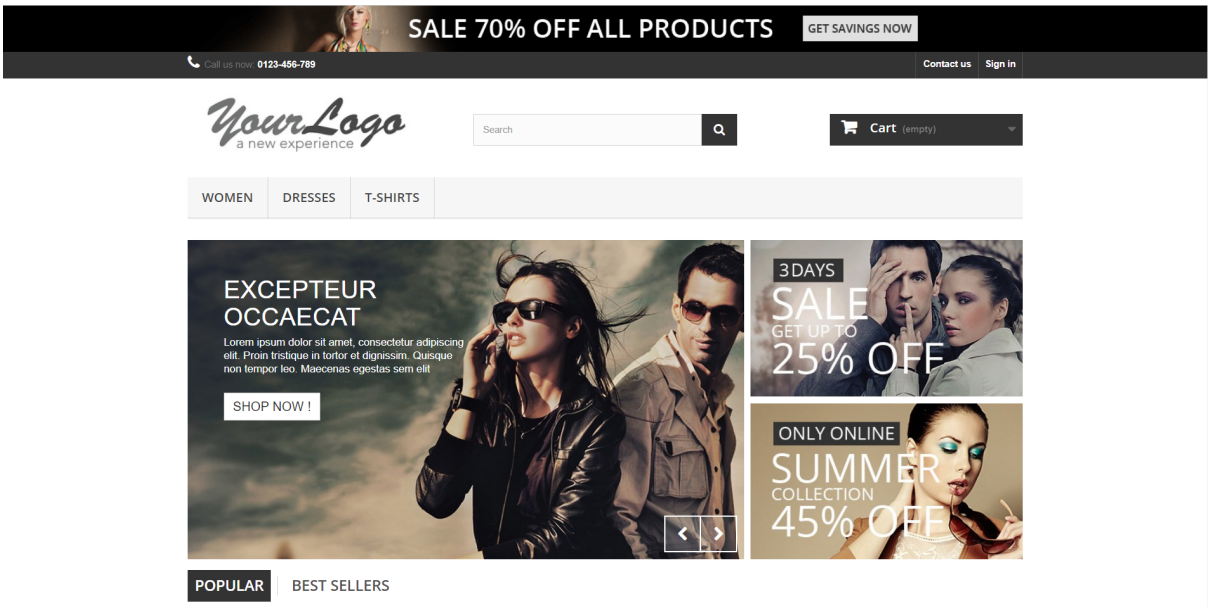
YouTube Video link - https://youtu.be/BDJ01HACny4

01). Mind Map and develop test cases for the given requirement



In the above mind map, we have shown the test cases that we've developed to test a scenario of logging to an e-commerce application, adding multiple items (2 in our case) and checking out to view the receipt. The test cases are categorized under 12 web pages that will be accessed during the testing process.

As we access the given url "http://automationpractice.com/index.php", we'll be forwarded to a home page of the above e-commerce platform. This page is called the landing page throughout this process.

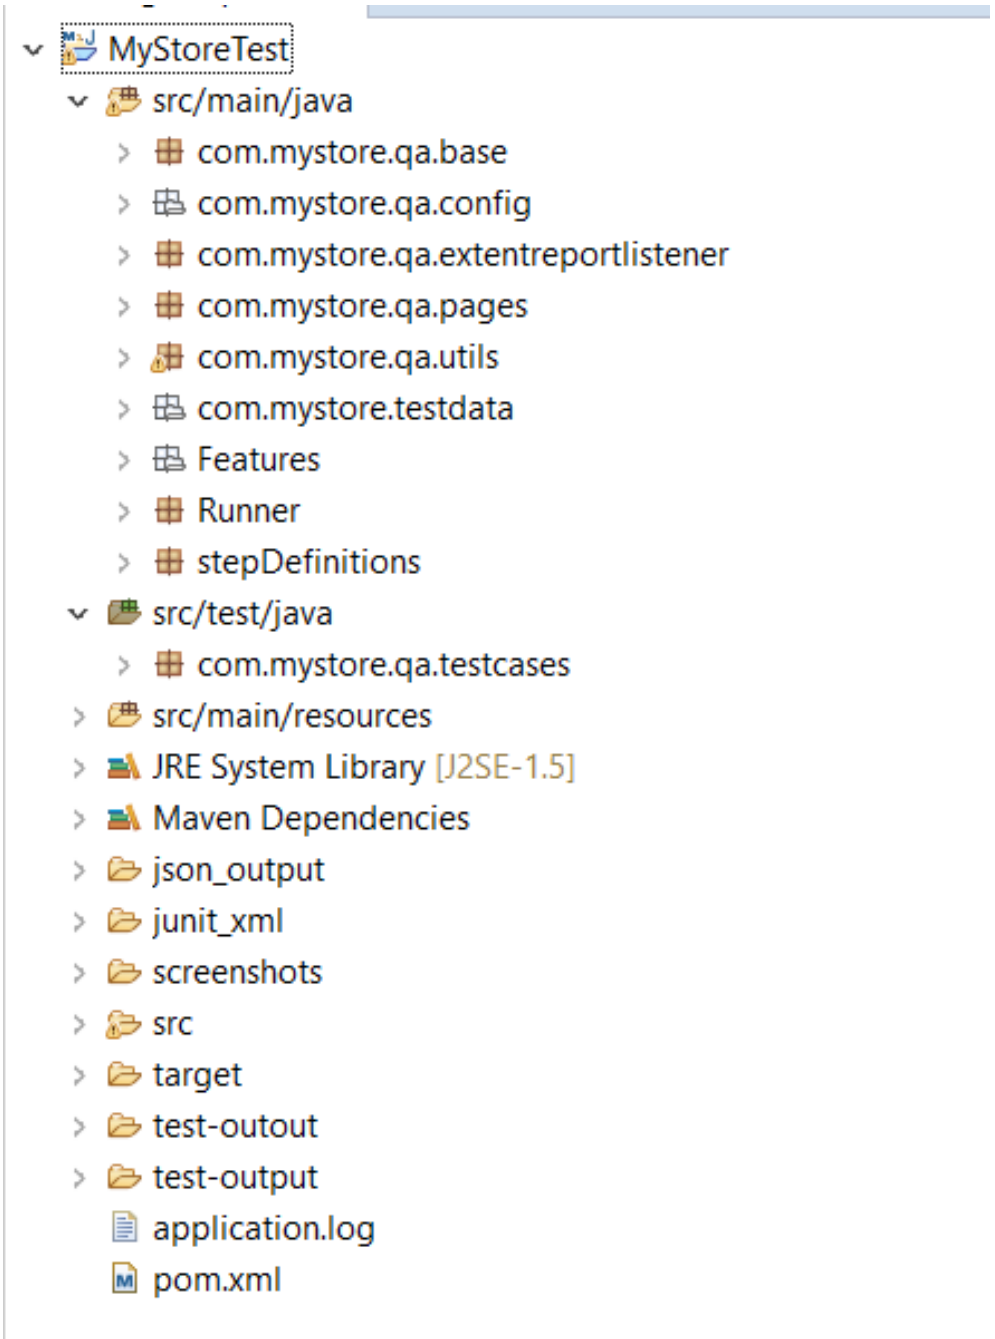


Once this website is accessed, we'll conduct the following test cases.

1. Validation of the title of the Landing Page
2. Validation of access to Login Page
3. Validation of the title of the Login Page
4. Test the availability of the login form in the page
5. Validate the user credentials to login and direction to Home page
6. Validation of the title of the Home Page
7. Validation of username in the Home Page
8. Validation of access to Women Dress Page
9. Validation of the title of the Women Dress Page
10. Validation of the Women Dress Page with regards to content
11. Testing the count of initial cart and adding items to the cart
12. Validation of the title of the Printed Dress Page
13. Validation of the Printed Dress Page with regards to content
14. Validation of availability of 2 items in the cart
15. Validation of the items in the cart
16. Validation of access to Shopping Cart Summary Page
17. Validation of the title of the Shopping Cart Summary Page
18. Validation of the Shopping Cart Summary Page with regards to content
19. Validation of access to Address Page
20. Validation of the title of the Address Page
21. Validation of the Address Page with regards to content
22. Validation of the title of the Shipping Page
23. Validation of access to Shipping Page
24. Validation of the Shipping Page with regards to content

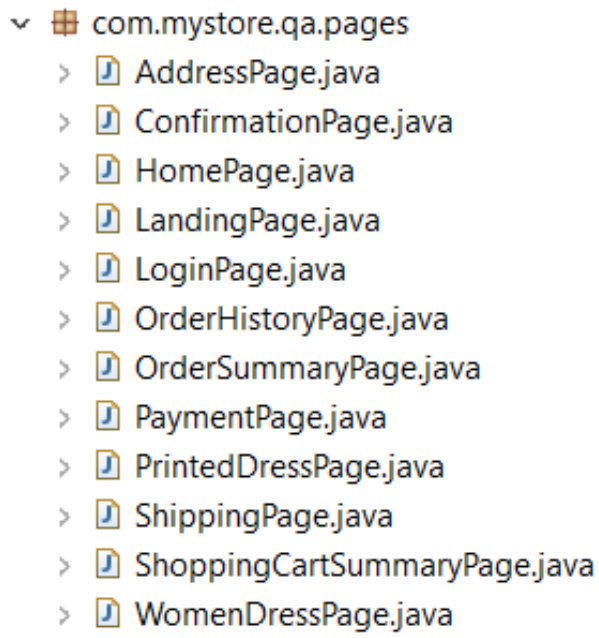
25. Validation of access to Payment Page
26. Validation of the title of the Payment Page
27. Validation of the Payment Page with regards to content
28. Validation of access to Order Summary Page
29. Validation of the title of the Order Summary Page
30. Validation of the Order Summary Page with regards to content
31. Validation of the order details in Order Summary Page
32. Validation of access to Confirmation Page
33. Validation of the title of the Confirmation Page
34. Validation of the Confirmation Page with regards to content
35. Validation of access to Order History Page
36. Validation of the title of the Order History Page
37. Validation of the Order History Page with regards to content
38. Validation of date of order placed
39. Validation of downloading the invoice

02). Hybrid Test Framework -- Page Object Model + Data-Driven framework + TestNG & Maven Project Structure

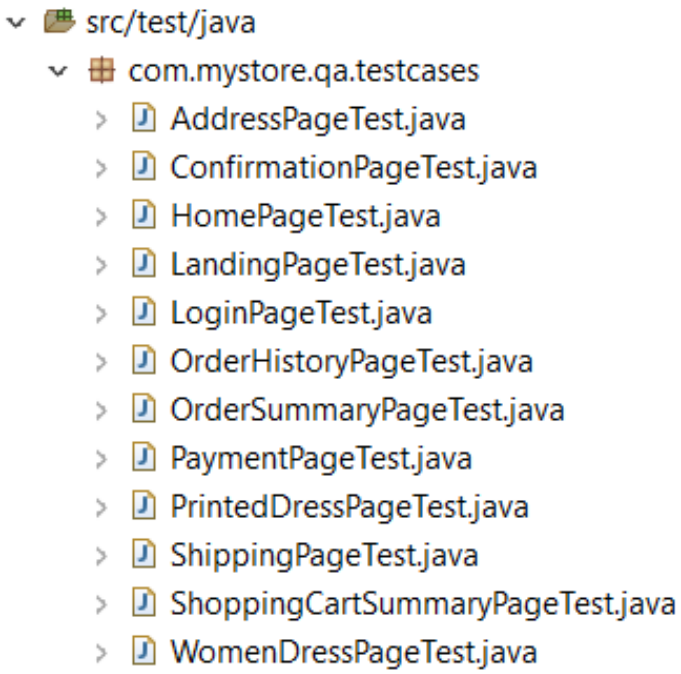


03). The corresponding packages for -- Scripting

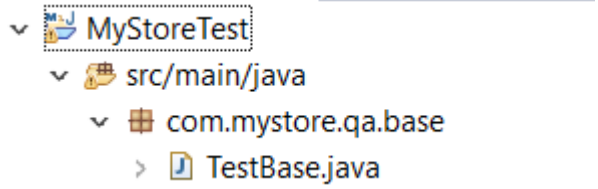
a. Page Layer: Creating and storing the test object description using Page Factory – Framework



b. Test Layer: Multiple test cases using TestNG annotations – Framework



c. Test Base: Prerequisite of initializing the drivers, properties, etc. – Framework



TestBase.java

```
import java.io.FileInputStream;

public class TestBase {
    public static WebDriver driver;
    public static Properties prop;
    public static EventFiringWebDriver e_driver;
    public static WebEventListener eventListener;

    public TestBase(){
        try {
            prop = new Properties();
            FileInputStream ip = new FileInputStream(System.getProperty("user.dir")+ "/src/main/java/com/mystore/qa/config/config.properties");
            prop.load(ip);
        } catch (FileNotFoundException e) {
            e.printStackTrace();
        } catch (IOException e) {
            e.printStackTrace();
        }
    }

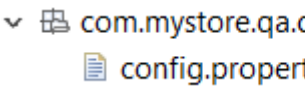
    public static void initialization() {
        String browserName = prop.getProperty("browser");
        if(browserName.equals("chrome")){
            System.setProperty("webdriver.chrome.driver", "F:\\SQA\\chromedriver.exe");
            driver = new ChromeDriver();
        }
        else if(browserName.equals("firefox")){
            System.setProperty("webdriver.gecko.driver", "F:\\SQA\\geckodriver.exe");
            driver = new FirefoxDriver();
        }

        e_driver = new EventFiringWebDriver(driver);
        eventListener = new WebEventListener();
        e_driver.register(eventListener);
        driver = e_driver;

        driver.manage().window().maximize();
        driver.manage().deleteAllCookies();
        driver.manage().timeouts().pageLoadTimeout(TestUtil.PAGE_LOAD_TIMEOUT, TimeUnit.SECONDS);
        driver.manage().timeouts().implicitlyWait(TestUtil.IMPLICIT_WAIT, TimeUnit.SECONDS);

        driver.get(prop.getProperty("url"));
    }
```

d. Configuration files: to store environment variables in. properties file like, URL, Default username and passwords, browser instances etc. – Framework



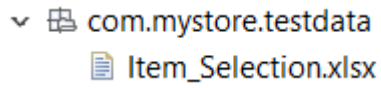
config.properties

```
url = http://automationpractice.com/index.php?

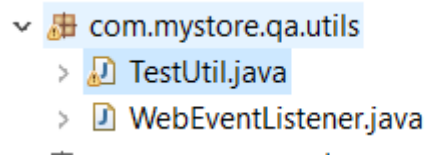
username = is4102@ucsctest.com
password = test@123

browser = chrome
```

e. Test data files: Excels, My SQL DB, Property file



f. Utilities: to store screenshots, generic functions, common utilities, emails etc.



g. Reports using HTML, XML, Extent Reports etc.- Framework

08). Selenium Integration with Cucumber and BDD Framework using Cucumber

▼ **Feature**: My Store Add Two Items
  ▼ **Scenario Outline**: My Store Add Two Items
    Given user is already on Landing Page
    When title of landing page is My Store
    Then user clicks on sign in button
    When title of login page is My Store Login
    Then user enters "<username>" and "<password>"
    Then user clicks on login button
    Then user is on home page
    Then user clicks on WOMEN button
    When title of women page is Women My Store
    Then user clicks on faded tshirt button
    Then user clicks on add to cart
    Then user clicks on continue shopping
    Then user clicks on printed dress
    Then user clicks on more button
    When title of printed dress page is Printed Chiffon Dress My Store
    Then user clicks on add to cart button
    Then user clicks on proceed to checkout button
    When title of order page is Order My Store
    Then user clicks on proceed to checkout button on order page
    When title of address page is Order My Store
    Then user clicks on proceed to checkout button on address page
    When title of shipping page is Order My Store
    Then user clicks on check box
    Then user clicks on proceed to checkout button on shipping page
    When title of payment page is Order My Store
    Then user clicks on pay by check button
    When title of order summary page is My Store
    Then user clicks on confirm button
    When title of order confirmation page is Order confirmation My Store
    Then user clicks on back button
    When title of order history page is Order history My Store
    Then user clicks on pdf button
    Then Close the browser
  ▼ **Examples**:

username	password
is4102@ucsctest.com	test@123

▼ **Scenario Outline**: My Store Add Two Items

Given user is already on Landing Page
When title of landing page is My Store
Then user clicks on sign in button
When title of login page is My Store Login
Then user enters "is4102@ucsctest.com" and "test@123"
Then user clicks on login button
Then user is on home page
Then user clicks on WOMEN button
When title of women page is Women My Store
Then user clicks on faded tshirt button
Then user clicks on add to cart
Then user clicks on continue shopping
Then user clicks on printed dress
Then user clicks on more button
When title of printed dress page is Printed Chiffon Dress My Store
Then user clicks on add to cart button
Then user clicks on proceed to checkout button
When title of order page is Order My Store
Then user clicks on proceed to checkout button on order page
When title of address page is Order My Store
Then user clicks on proceed to checkout button on address page
When title of shipping page is Order My Store
Then user clicks on check box
Then user clicks on proceed to checkout button on shipping page
When title of payment page is Order My Store
Then user clicks on pay by check button
When title of order summary page is My Store
Then user clicks on confirm button
When title of order confirmation page is Order confirmation My Store
Then user clicks on back button
When title of order history page is Order history My Store
Then user clicks on pdf button
Then Close the browser

a. Feature File using Gherkin Language

```
Feature: My Store Add Two Items

Scenario Outline: My Store Add Two Items

Given user is already on Landing Page
When title of landing page is My Store
Then user clicks on sign in button
When title of login page is My Store Login
Then user enters "<username>" and "<password>"
Then user clicks on login button
Then user is on home page
Then user clicks on WOMEN button
When title of women page is Women My Store
Then user clicks on faded tshirt button
Then user clicks on add to cart
Then user clicks on continue shopping
Then user clicks on printed dress
Then user clicks on more button
When title of printed dress page is Printed Chiffon Dress My Store
Then user clicks on add to cart button
Then user clicks on proceed to checkout button
When title of order page is Order My Store
Then user clicks on proceed to checkout button on order page
When title of address page is Order My Store
Then user clicks on proceed to checkout button on address page
When title of shipping page is Order My Store
Then user clicks on check box
Then user clicks on proceed to checkout button on shipping page
When title of payment page is Order My Store
Then user clicks on pay by check button
When title of order summary page is My Store
Then user clicks on confirm button
When title of order confirmation page is Order confirmation My Store
Then user clicks on back button
When title of order history page is Order history My Store
Then user clicks on pdf button
Then Close the browser

Examples:
  | username             | password |
  | is4102@ucsctest.com  | test@123 |
```

b. Step Definition file using cucumber Gherkin annotations

```java
package stepDefinitions;

import org.junit.Assert;

public class AddTwoItemStepDefinition {

    WebDriver driver;

    @Given("^user is already on Landing Page$")
    public void user_is_already_on_Landing_Page() {
         System.setProperty("webdriver.chrome.driver","F:\\SQA\\chromedriver.exe");
         driver = new ChromeDriver();
         driver.get("http://automationpractice.com/index.php?");
    }

    @When("^title of landing page is My Store$")
    public void title_of_landing_page_is_My_Store() {
        String title1 = driver.getTitle();
        System.out.println(title1);
        Assert.assertEquals("My Store", title1);
    }

    @Then("^user clicks on sign in button$")
    public void user_clicks_on_sign_in_button() {
        WebElement signinBtn =
        driver.findElement(By.xpath("//*[@id=\"header\"]/div[2]/div/div/nav/div[1]/a"));
        JavascriptExecutor js = (JavascriptExecutor)driver;
        js.executeScript("arguments[0].click();", signinBtn);
    }

    @When("^title of login page is My Store Login$")
    public void title_of_login_page_is_My_Store_Login() {
        String title2 = driver.getTitle();
        System.out.println(title2);
        Assert.assertEquals("Login - My Store", title2);
    }

    @Then("^user enters \"(.*)\" and \"(.*)\"$")
     public void user_enters_username_and_password(String username, String password){
     driver.findElement(By.name("email")).sendKeys(username);
     driver.findElement(By.name("passwd")).sendKeys(password);
```

c. Test Runner class Cucumber

```java
package Runner;

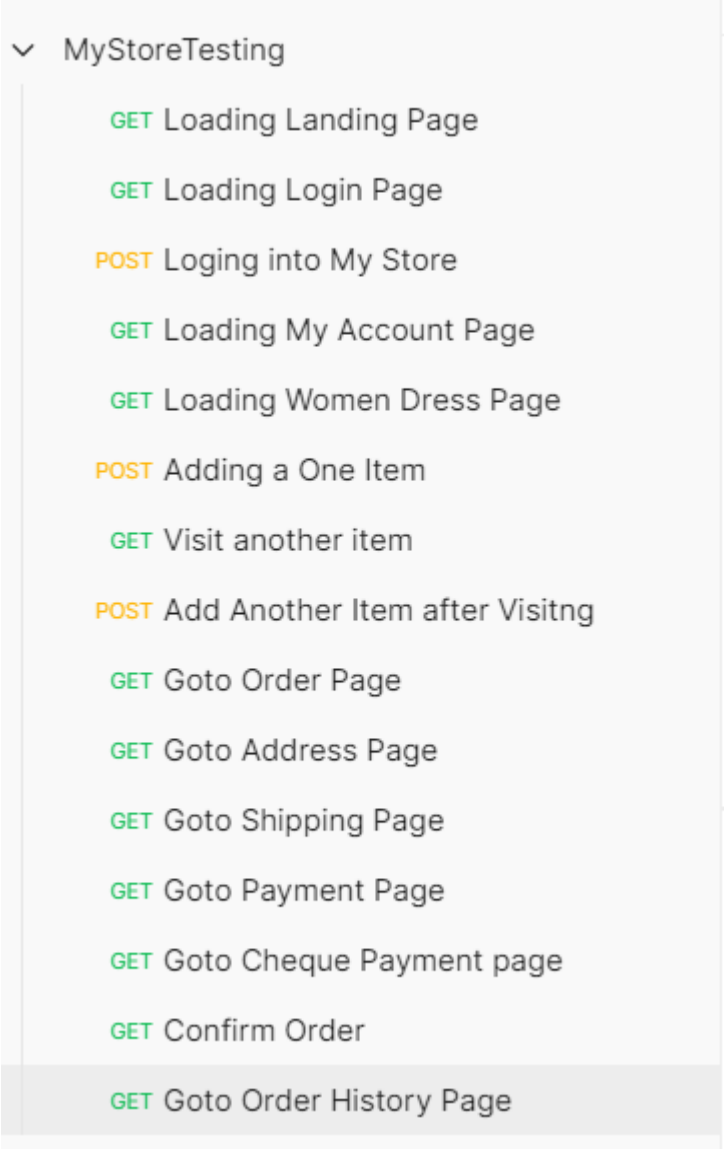
import org.junit.runner.RunWith;

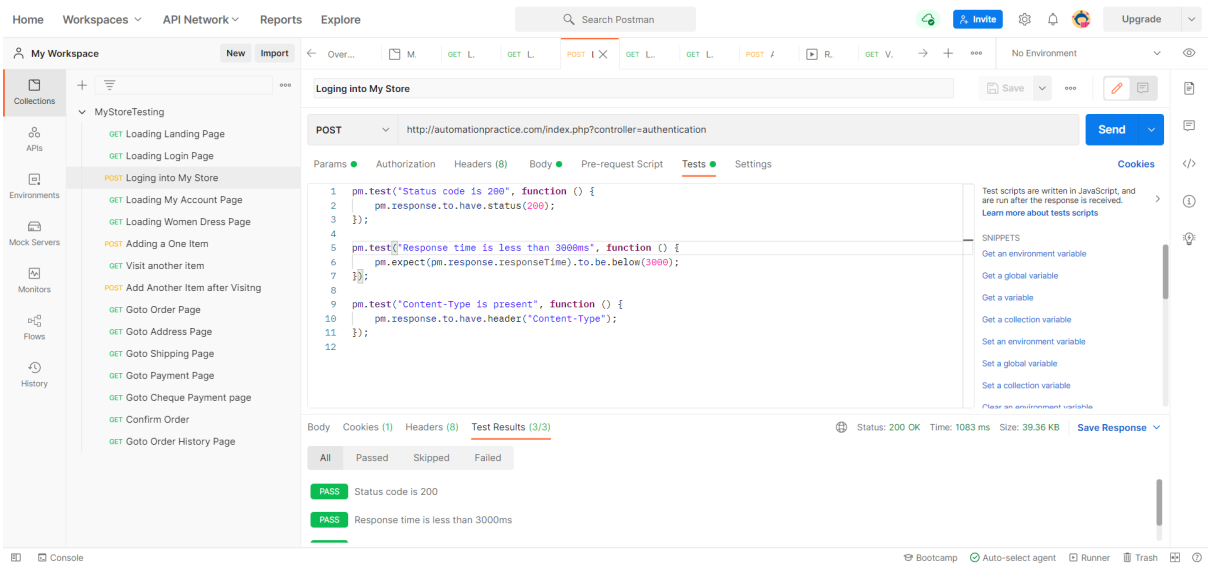
    @RunWith(Cucumber.class)
    @CucumberOptions(
            features = "D:\\UCSC\\4th Year\\1st Semester\\IS4102 Advanced Software Quality Assurance\\Assignment 2\\MyStoreTest\\src\\main\\java\\Features",
            glue={"stepDefinitions"}, //the path of the step definition files
            plugin= {"pretty","html:test-outout", "json:json_output/cucumber.json", "junit:junit_xml/cucumber.xml"}, //to generate different types of reporting
            monochrome = true, //display the console output in a proper readable format
            strict = true, //it will check if any step is not defined in step definition file
            dryRun = false //to check the mapping is proper between feature file and step def file
            //tags = {"~@SmokeTest" , "~@RegressionTest", "~@End2End"}
            )

public class TestRunner {

}
```

09). Identify web services available for the above-identified test scenarios and test them using Postman





10). Develop performance test script using JMETER for above-identified test scenarios and measure response time

Some screenshots of Sampler Results and Request Bodies for the 13 steps are added. And the Test fragment of the View Results Tree and the Summary report is also provided.
